Professional Summary

Full-stack Developer with over 2 years of experience in developing scalable web applications and APIs, specializing in Python (Django, FastAPI) and JavaScript (React). After a recent career break focused on deepening my expertise in data science and machine learning, I'm excited to re-enter the field, leveraging new skills in backend API development and frontend design. Proven ability to own and deliver projects from conception to deployment, with a strong focus on clean code, security, and pragmatic problem-solving. Looking forward to contributing to a high-impact, fast-paced team.

Professional Experience

Software Developer | Cyber Inquest Pvt Ltd, Kirtipur, Nepal

January 2021 - August 2022

- Developed and implemented a custom CRM system using Python and Django, boosting productivity through automating manual processes.
- Built RESTful APIs with Django and MySQL to handle user authentication and data processing, integrating with JavaScript/Flutter on the frontend.
- Automated data extraction from PDFs into MySQL databases, improving data collection efficiency.
- Mentored interns on Python development best practices, ensuring quality and consistency in project deliverables.

Side Projects

Algorithm Visualizer

- Developed an interactive visualization tool for various algorithms using Pygame, enhancing understanding of data structures and algorithms through dynamic animations.
- Demonstrated strong problem-solving skills by optimizing algorithm performance and improving visualization accuracy.
- Technologies used: Python, PyGame

Real Time Sentiment Analysis

- Developed a python based web application for real-time sentiment analysis of user input data using a pre-trained BERT model.

- Implemented the backend with FastAPI and integrated a pre-trained BERT model using Tensorflow to classify sentiment.

- Wrote Unit Tests using Pytest to ensure code reliability and maintainability, and enforced coding standards with Pylint for clean, optimized code.
- Technologies used: Python, FastAPI, TensorFlow, PyTest, Pylint

Software For HouseHold Expenses

- Created a web application to help users track and manage household expenses, enabling better financial planning and budgeting.

- Utilized MySQL for efficient data storage and retrieval, ensuring data integrity and quick access to user information.

- Integrated data visualization features using JavaScript libraries to display spending patterns on Calendar, enhancing user understanding of their financial habits.
- Technologies used: Python, Django, Mysql, ReactJS

Education

B.Sc. in Computer Engineering | National College of Engineering, Talchikhel-Lalitpur, Nepal

October 2016 - February 2020

Technical Skills

- Programming Languages: Python, TypeScript
- Frameworks & Libraries: Django, FastAPI, Flask, ReactJS, TensorFlow, Keras, Pandas, NumPy, BeautifulSoup
- Databases: MySQL, PostgreSQL, MongoDB
- Tools & Technologies: Docker, Git, RESTful APIs, Redis, Celery, Elasticsearch
- Web Technologies: AJAX, HTMX, Redux, Bootstrap
- Testing: Unit Testing, TDD
- Deployment: DigitalOcean
